用途 Purpose

GSD潜水搅拌机分为混合搅拌机与低速推流器，主要适用于：市政和工业污水处理过程中的混合、搅拌和环流：活性污泥池、生物反应池、搅拌池、贮泥井、均衡池、污水池等；景观水环境的养护设备，改善水体质量；创建水流，有效阻止悬浮物沉积。

The submersible mixers in our company include mixing agitator and low-speed flow propeller, mainly used for: The purposes of mixing, agitating and making ring flows in the process of municipal and industrial sewage treatment: activated sludge tank, bioreactor tank, mixing tank, sludge silos, equalizing reservoir, sewage tank and etc.; The maintenance equipment for the landscape water environment, improving the quality of the water body; Creating water flow, effectively preventing the sedimentation of the suspended substances.

- The two rows of independent mechanical sealing ensure the long-term and reliable operation of the submersible motor.
- The international well-known high-quality bearings have longer service life, which are maintenance free.
- The unique sealing design for the cables removes the hidden danger of water leakage for the cables.
- The shaft of the motor employs the stainless steel, and the rotors are inspected with the use of dynamic balancing, leading to smooth rotation.
- The in-built leakage sensor and the device for the overtemperature protection for the windings of the stator(No leakage sensor for MA0.37/6 or MA0.55/4).
- The mixer agitators have the stainless steel pressing impeller, which are of the sweptback shape through the optimized design, resulted in high efficiency and self-cleaning function.
- The vanes of the low-speed flow propeller are made of enhanced PU, which are sweptback shape, have the self-cleaning function, the smooth and streamlined propeller surface distributes the propelling power equally.
- On the low-speed flow propeller, all the tightening pieces which will contact media employ the stainless-steel material; The decelerator employs integrated reducer with high safety coefficient, whose standard configuration is CYCLO, you can also choose helical gear speed reducer.

注：

- 潜水搅拌机的专用安装系统，可在无需排出池中污水的情况下，快速安装和拆卸潜水搅拌机。
- 安装系统 I 只适用 $H \leq 3m$ ，机型为 MA0.37/6、MA0.55/4、MA0.85/8 和 MA1.5/6，可在水平方向和垂直方向调节角度。
- 安装系统 II、III 导杆可沿水平方向绕导杆轴线旋转，最大转角为 $\pm 60^\circ$ ，当 $H > 4m$ 时需在导杆中间添加一支撑架。
- 支撑架和下托架与池壁、池底均可用膨胀螺栓或化学锚栓固定，对于大直径叶轮和大功率搅拌机最好采用预埋。
- 客户订货时，请提供池深 H 及池型图，以便确定导杆尺寸和支撑架个数。
- 同一种安装系统，多台搅拌机可共用一套起吊系统。
- 安装系统可选择采用不锈钢或碳钢防腐材质。

Installation modes and dimensions

The submersible mixers can be installed in a multiple of modes. Here are four generally accepted modes of installation for selection with reference made to the following table. Our company can also provide the special designs in accordance with the demand of the users.

Notes:

- The special installation systems for the submersible mixers can facilitate the quick installation and dismantling of the submersible mixers under the conditions of no need for draining off sewage from the pond.
- Installation System I is only suitable for $H \leq 3m$ and the mixer models of MA0.37/6, MA0.55/4, MA0.85/8 and MA1.5/6, and with the possibility of adjusting the angles in both horizontal direction and longitudinal direction.
- For installation systems II and III, the guide rod can rotate round the axial line of the guide rod along the horizontal direction with the maximum angle of rotation $\pm 60^\circ$, if $H > 4m$, it is necessary to add a supporting frame between the guide rods.
- The supporting frame and the lower support shall be fixed onto the pond wall and the pond bottom with the use of expansion bolts or chemical anchors. For the big diameter impellers and the big power mixers the best choice is to pre-embed.
- While placing an order by customer. Please supply the pond depth H and the drawing of the pond shape so as to determine the dimensions of the guide rod and the number of the supporting frames.
- A multiple of mixers with the same installation system can share one lifting system.
- The installation systems may employ the material of stainless steel or carbon steel for the selection of the corrosion-resisting properties.

配置示意图

潜水搅拌机的安装定位对其搅拌效果有很大的影响，为了达到良好的运行效果，我们建议用户按照专业设计人员的要求去做，要充分考虑到水池的形状，进出水的位置以及搅拌机的水流反射到构筑物而引起的涡流等情况，尽量减少短路循环和死角的产生，避免与池壁的撞击而降低流速。参照下面的配置示意图，可帮助您合理选择搅拌机和安装型式。

Arranging sketch map

The installation and positioning of the submersible mixers will produce a great impact on the effect of mixing. In order to obtain the perfect operating result, it is suggested that the advice of the specialized designers shall be followed and full consideration given to the shape of the pond, position of the water inlet and outlet, the vortex resulting from the outflow from the mixer onto the structures and some other conditions. Every effort shall be made to reduce the short-circuit circulation and the occurrence of dead corners and avoid the dashing of the flow against the pond wall for lowering the flow velocity. Making reference to the arranging sketch map below will help you to make a reasonable selection of the mixers and their installation modes.
